The 5" Rainbow I/II and the 16/9 Rainbow monitors can be equipped with professional battery backs with Anton-Bauer, NP1, V-Mount or PAG battery sockets. These monitors may also be powered by many Mini DV batteries thanks to a whole line of Smart Mini DV battery-backs. All models of Transvideo battery backs are snapped-on in a second and do not require any modifications of the monitors.

Anton-Bauer, NP1, V-Mount or PAG Battery/Handle Backs:

The Anton-Bauer, NP1, V-Mount and PAG battery snap-on backs feature an integrated handle and may be set up so that the handle is on the right side of the monitor (by the potentiometers), or to the left of the screen. Coupled with a wireless receiver, the monitor becomes highly portable. It is an ideal system for Directors, DPs or anyone who wishes to walk around the set freely.

Smart MiniDV Battery Backs:

This external accessory snaps-on and is secured to the monitor thanks to a 1/4-20 knob. The Smart Mini DV battery back steps up 7.2v Mini DV batteries to 12v DC. Excessive discharge of Mini DV batteries may cause the charger to no longer recognize the batteries, or to damage them. Transvideo Smart MiniDV battery backs feature a sophisticated voltage protection system preventing over-discharge of the Mini DV batteries. It will also shut off automatically when the voltage is too low. The Smart Mini DV battery backs provides an On/Off switch to easily cut power to the monitor, without removing the batteries. It also features an LED indicator: Green: power on, Orange: low battery, Red: auto shut-off. The Smart Mini DV battery backs offer two sockets and may be used with one or two batteries. 5 models of Smart MiniDV battery back exist to accommodate Canon, Sony, Panasonic, JVC, Samsung, and Hitachi mini DV batteries.
