

Raincovers for Transvideo monitors

Our new Raincovers will protect your Transvideo equipment under the worst weather conditions without affecting your viewing capability.

The body of the raincover is made of soft waterproof material, while a rigid anti-reflective lexan protects the screen itself. Because the soft material does not cover the image, the use of the raincover does not produce reflections and your viewing comfort is preserved.

Transvideo raincovers hard lexan is secured by velcros all around the opening of the soft material.

The anti-reflective lexan may be replaced, if it becomes scratched over time.

The raincovers are slightly larger than the monitors and they may be closed on the bottom by the set of velcro fasteners.

The Raincover for the 10.4" monitor also protects the battery back and other accessories such as the tuner.
